**Indexing**

**RUA, the Institutional Repository of the University of Alicante**, is designed to be a locus for the scientific and teaching output of University members. The RUA answers the need to store, manage and preserve all the digital documentation generated by University members and thus avoid the physical dispersion and loss of valuable work. The RUA has been created to respond to the ever more popular movement of allowing open access to the results of publicly-funded research. Open access to research exponentially increases its impact, meaning that the more access there is to the work carried out, the more visible it will be and the more impact it will have. In order to make this impact possible, the RUA ensures that the documents deposited in the Repository are well-positioned in Google searches. RUA uses the DSpace open code software developed in collaboration with MIT (Massachusetts Institute of Technology) and Hewlett Packard. The Dspace software has been developed under the BSD open code license and implements the OAI-PMH (Open Archives Initiative – Protocol for Metadata Harvesting) protocol used for transmitting metadata over Internet. The RUA metadata is coded as per the Qualified Dublin Core standard.

This allows the documents deposited in the RUA to be accessed by the following harvesters:

## RUA. Repositorio Institucional de la Universidad de Alicante

Bienvenido al Repositorio Institucional de la Universidad de Alicante.

RUA ofrece acceso abierto al texto completo en formato digital de los documentos generados por los miembros de la Universidad de Alicante en su labor de docencia e investigación

El objetivo de RUA es dar mayor visibilidad a la producción científica y docente de la Universidad, aumentar el impacto y asegurar la preservación de dicha producción.

RUA recoge todo tipo de materiales digitales, tanto preprints como postprints, comunicaciones a congresos, documentos de trabajo, materiales docentes y objetos de aprendizaje, revistas editadas por la Universidad de Alicante, así como documentos y materiales resultantes de la actividad institucional realizada por sus centros, unidades y servicios.

## **An approach to the biological, historical and psychological repercussions of gender verification in top level competitions**

*María José Martínez-Patiño, Covadonga Mateos-Padorno, Aurora Martínez-Vidal, Ana María Sánchez Mosquera, José Luis García Soidán, María del Pino Díaz Pereira, Carlos Francisco Touriño-González*

### Abstract

Different kinds of disorders of sex development (DSD) have been observed in athletes from different countries along the history of sport. The detection of an abnormal chromosomal pattern or gonadal dysgenesis has been always associated to the gender verification tests which international sports institutions have performed from 1960s and abandoned as systematic practice in 2000. Such methods have been heavily criticized by specialists of different fields such as genetics, endocrinologists and psychologists. The use of a femininity control at the present days to detect possible males who fraudulently pretend to compete in female only events is inconsistent. The possible decision of the International Olympic Committee to establish special centers to manage future DSD cases is also discussed. A major concern on the confidentiality between doctors and patients and the establishment of care protocols for the psychological support of athletes in such delicate situations is needed. This ties altogether with the psychological and social repercussions of the gender verification on the lives of

institutions have performed from 1960s and abandoned as systematic practice in 2000. Such methods have been heavily criticized by specialists of different fields such as genetics, endocrinologists and psychologists. The use of a femininity control at the present days to detect possible males who fraudulently pretend to compete in female only events is inconsistent. The possible decision of the International Olympic Committee to establish special centers to manage future DSD cases is also discussed. A major concern on the confidentiality between doctors and patients and the establishment of care protocols for the psychological support of athletes in such delicate situations is needed. This ties altogether with the psychological and social repercussions of the gender verification on the lives of athletes with DSD. When cases of sex ambiguities are detected, issues such as the respect of privacy, the need of specific protocols to follow with flexible and diversified tests considering the particularity of each case as well as the psychological support of the athletes and their family have to be taken into account. Although health tests are needed for both men and women, DSD athletes should not be discriminated for their genetic pattern and they should be allowed to compete as it occurs with other athletes with genetic affections which do not involve the sex and that give them a phenotypical advantage over other athletes.

**Key words:** GENDER TEST; DISORDERS SEX DEVELOPMENT (DSD); GENDER VERIFICATION; SPORT; FEMALE

**The JOURNAL OF HUMAN SPORT AND EXERCISE (ISSN 1988-5202)** is a scientific review published by the Research Group for The Sciences of Physical Activity and Sport, attached to the Department of General and Specific Didactics of the Faculty of Education at the University of Alicante. This publication is a result of the current development of Sports Sciences that are claiming their place as a potential field of knowledge in a world context.

The review is published electronically, with two issues a year and one special issue dedicated to a topic of interest, generated by the minutes of an international congress, all subject to external assessment. Our publication also identifies itself with the advances being made in Sports Sciences from an international perspective. The publication's advisory board is therefore composed by experts from different Universities in several countries.
